

The Social Semantic Desktop

Networked  
Environment for  
Personal  
Ontology-based  
Management of  
Unified  
Knowledge

## NEPOMUK - The Goal

NEPOMUK gathers together researchers, industrial software developers and representative industrial users to develop a comprehensive solution for extending the personal desktop into a collaboration environment which supports both personal information management and the sharing across social or organizational relationships.

## NEPOMUK - The Social Semantic Desktop

NEPOMUK's solution is called the Social Semantic Desktop. This new desktop is:

- **Semantic:** it makes knowledge processable by the computer
- **Social:** it supports the interconnection and exchange with other desktops and their users

## NEPOMUK - Open source tools and standards for smooth collaboration

NEPOMUK provides a freely available open-source framework with a set of standardized interfaces, ontologies and applications. NEPOMUK's standardized plug-in architecture combined with usage experiences opens up manifold business opportunities for new generic or domain-services.
